

TANCHI CHRISPUS

Cybersecurity Student | Junior Pentester | Aspiring Cybersecurity Analyst

your.barontanchi.com | linkedin.com/in/yourprofile | github.com/tanchi05 | <https://portfolio-website-azure-rho-50.vercel.app>

PROFESSIONAL SUMMARY

Cybersecurity student with a genuine interest in how systems are built — and how they break. I am focused on developing practical skills in penetration testing, web security, Linux, and networking, with a long-term goal of working in offensive security and red teaming. I approach learning hands-on: building tools, working through labs, and studying real attack techniques to understand how to defend against them. Currently pursuing the ALX Cybersecurity Program while continuously building personal projects and lab environments. I am looking for opportunities in cybersecurity internships, SOC roles, or junior analyst positions where I can grow, contribute, and develop into a well-rounded security professional.

EDUCATION

Bachelor of Science in Computer Science

Multimedia University of Kenya (MMU) | 2023 – Present

TECHNICAL SKILLS

Security: Web security fundamentals, Basic penetration testing, Enumeration, SSH, Networking fundamentals

Programming & Scripting: Python, PHP, Bash scripting, JavaScript, SQL / MySQL

Systems & Platforms: Linux (Kali Linux, Ubuntu), Windows environments, VirtualBox, XAMPP

Development: HTML, CSS, Git / GitHub

Tools & Labs: Kali Linux, VirtualBox, OverTheWire (Bandit), Cybersecurity lab environments

PROJECTS

Python Port Scanner | *Python, Socket Programming*

- Built a command-line port scanner using Python's socket library to identify open ports and running services on target hosts.
- Reinforced understanding of TCP/IP fundamentals, service enumeration concepts, and the role of port scanning in the reconnaissance phase of penetration testing.
- Structured the tool with clean input handling and output formatting, with plans to extend functionality to include banner grabbing and service version detection.

Cybersecurity Learning Repository | *Git, Bash, Linux, SSH, Networking*

- Maintains an active GitHub repository documenting structured notes and walkthroughs covering Linux command-line fundamentals, Bash scripting, SSH concepts, and networking theory.
- Completed the full OverTheWire Bandit wargame series, with documented solutions covering privilege escalation, file permissions, process inspection, and remote shell access.
- Repository serves as a personal reference and demonstrates consistent, self-directed learning habits.

HostelSync — Hostel Management System | *PHP, MySQL, HTML, CSS, JavaScript, PDO*

- Designed and developed a full-stack hostel management system including student registration, room booking, payment tracking, admin dashboard, and complaint management modules.
- Implemented secure login and session management using PHP with PDO prepared statements to prevent SQL injection.
- Used the application as a controlled environment to study web security concepts including input validation, authentication flaws, and session handling from both developer and attacker perspectives.

Python Firewall — Self-Directed Project (In Progress) | *Python, Networking, Linux*

- Currently designing a basic Python-based packet filtering tool to deepen practical understanding of network traffic analysis, firewall logic, and rule-based access control.
- Project is motivated by a desire to move beyond theory and build a working understanding of how firewalls operate at a low level.

EXPERIENCE & LEADERSHIP

Project Lead — HostelSync — University Group Project

2024 – Present

- Led a four-person development team across all five project phases, from requirements gathering and system design through implementation, testing, and documentation.
- Coordinated sprint planning, task delegation, and progress tracking using an Agile Iterative methodology across four development sprints.
- Produced comprehensive technical documentation including system requirements, ERD design, UAT test cases, and chapter-by-chapter reports.

Project Lead — FarmSense — ALX Team Overdrive Syndicate

2025

- Co-led the concept development and pitch preparation for FarmSense, an AI-powered mobile and SMS-based agricultural advisory platform targeting smallholder farmers in Kenya.
- Coordinated a six-person team to complete milestone worksheets, stakeholder research, and a full investor pitch deck within program deadlines.
- Contributed to product positioning, user persona development, and presentation design.

Volunteer Technical Support — Community & Peers

Ongoing

- Provided informal technical troubleshooting support for peers and community members, covering OS issues, software configuration, networking, and device setup.
- Developed patience, clear communication, and the ability to diagnose and explain technical problems to non-technical users.

LABS & LEARNING ENVIRONMENTS

- Kali Linux VM — Primary offensive security practice environment running in VirtualBox for tool exploration, enumeration, and lab exercises.
- Windows 10 VM — Secondary environment for cross-platform testing and understanding Windows-side attack surfaces and defenses.
- Live Boot Kali Linux — Configured and used a bootable Kali environment for flexible, hardware-level access without a persistent installation.
- OverTheWire Bandit — Completed all levels, building practical Linux, SSH, and shell scripting skills through progressive challenge-based learning.

CERTIFICATIONS & LEARNING

ALX Cybersecurity Program
 Google Cybersecurity Certificate
 CompTIA Security+

In Progress
Planned
Planned

COMMUNITY & CONTINUOUS LEARNING

Actively engaged in cybersecurity learning communities on Reddit (r/netsec, r/cybersecurity, r/HowToHack), Discord security servers, and YouTube channels covering penetration testing, CTF walkthroughs, and security research. I follow security news, vulnerability disclosures, and tool developments as part of a consistent daily learning habit. Committed to growing from a student with strong fundamentals into a well-rounded, employable offensive security professional.
